

Patent claims

1. Human interleukin 4 mutant proteins as antagonists or partial agonists of human interleukin 4, characterized in that, in addition to replacements at positions 121, 124 or 125, modifications are also present at the N terminus and/or
- 5 C terminus, and/or in that potential glycosylation sites are deleted from the molecule and/or in that the mutant protein is coupled to a non-protein polymer.
2. Medicaments which comprise the substances according to Claim 1.
